Data Cleaning

- Data Removal
 - Analyzed variables and removed based on topic / theme covered.
- Missing Data
 - Reviewed reason behind variables with many missing observations.
 - Observations with many missing questions removed.

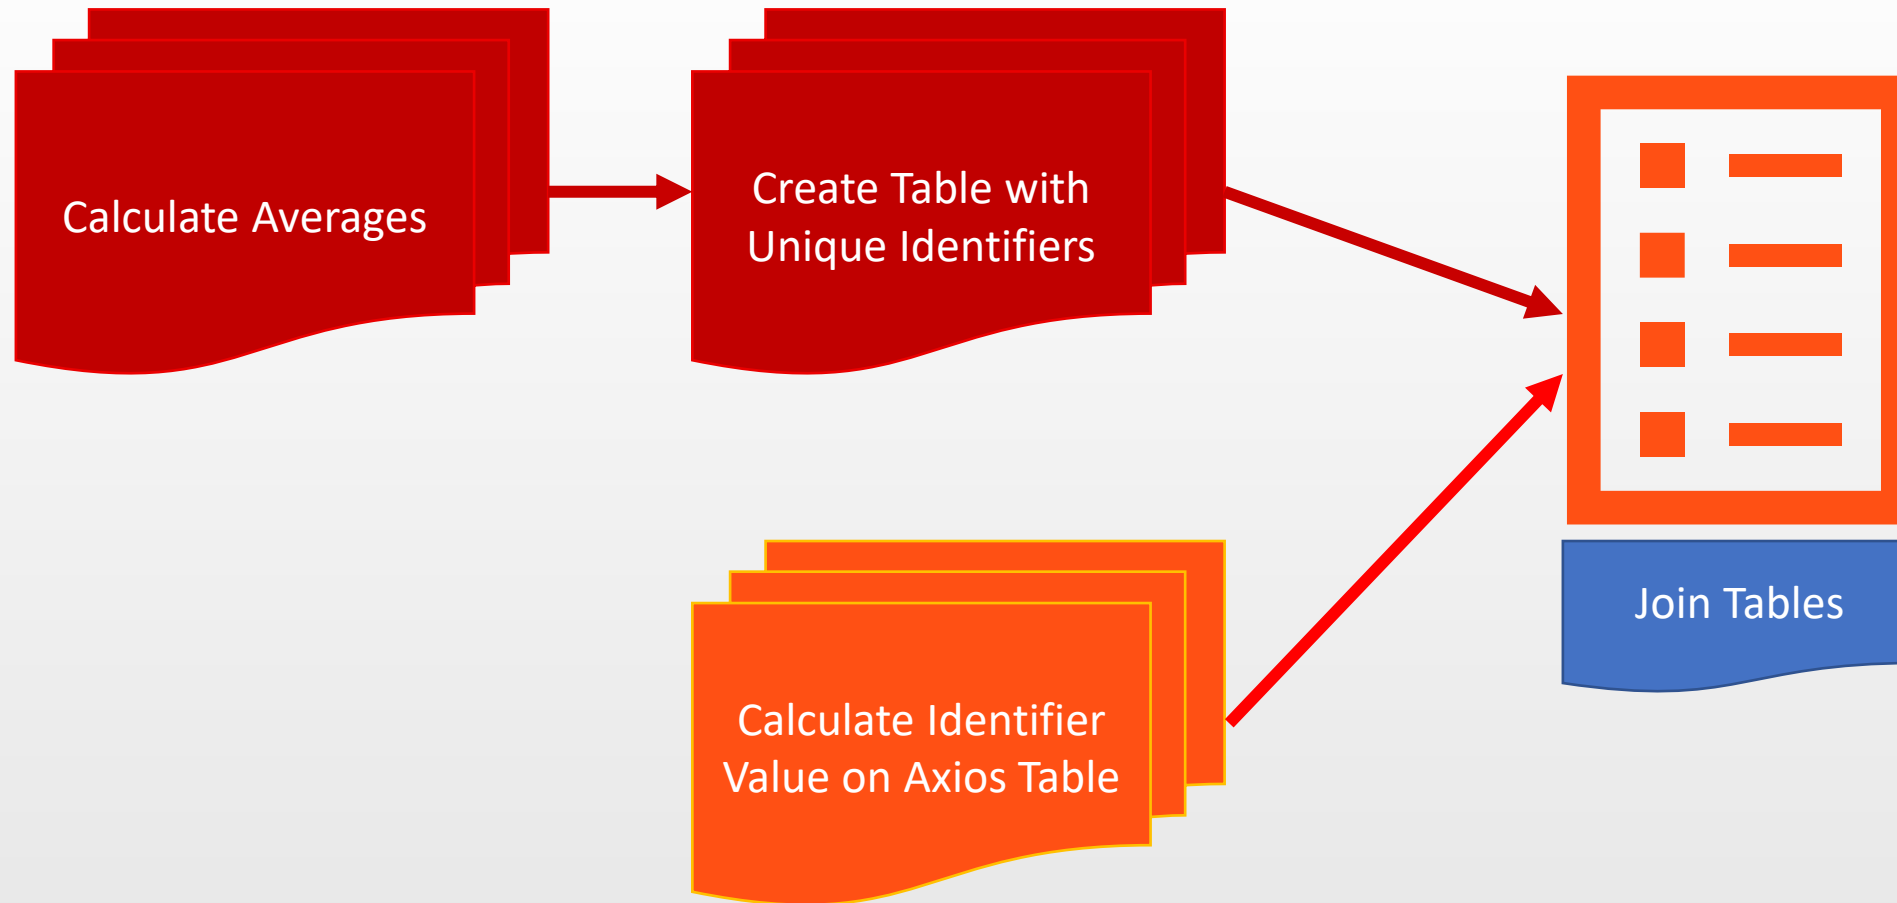

Data Merging

- For the June period, there were two tables to be merged.
- Demographic variables age, employment type, and gender were used as identifiers to join tables.
- The variables needed to be re-calculated to match the tables.

Data Merging

Data Analysis

- Complete initial data exploration including correlation amongst variables.
- Determined models would be used to identify clusters.
- In selecting the clusters, I reviewed various variable combinations.
- The combinations were based on topic/theme of questions.
 - Changes to lifestyle
 - Current state
 - Risk perception
 - Comfort engaging in public activities
 - Coronavirus experience

Consumer Groups

Executive Summary

Consumer Groups

- For each period in the study there were five distinct consumer groups.
 - Those that tested positive for coronavirus were their own group in each period.
- Perception of control was a factor in June.
- Knowing someone who died from coronavirus was a key factor in December.

Coronavirus Concerns

- Between the two periods there was an increase in concern about the coronavirus outbreak.
- The percentage of respondents who stated they were “Extremely Concerned” about coronavirus increased from 26% to 34% between the two periods.
